

iView Media

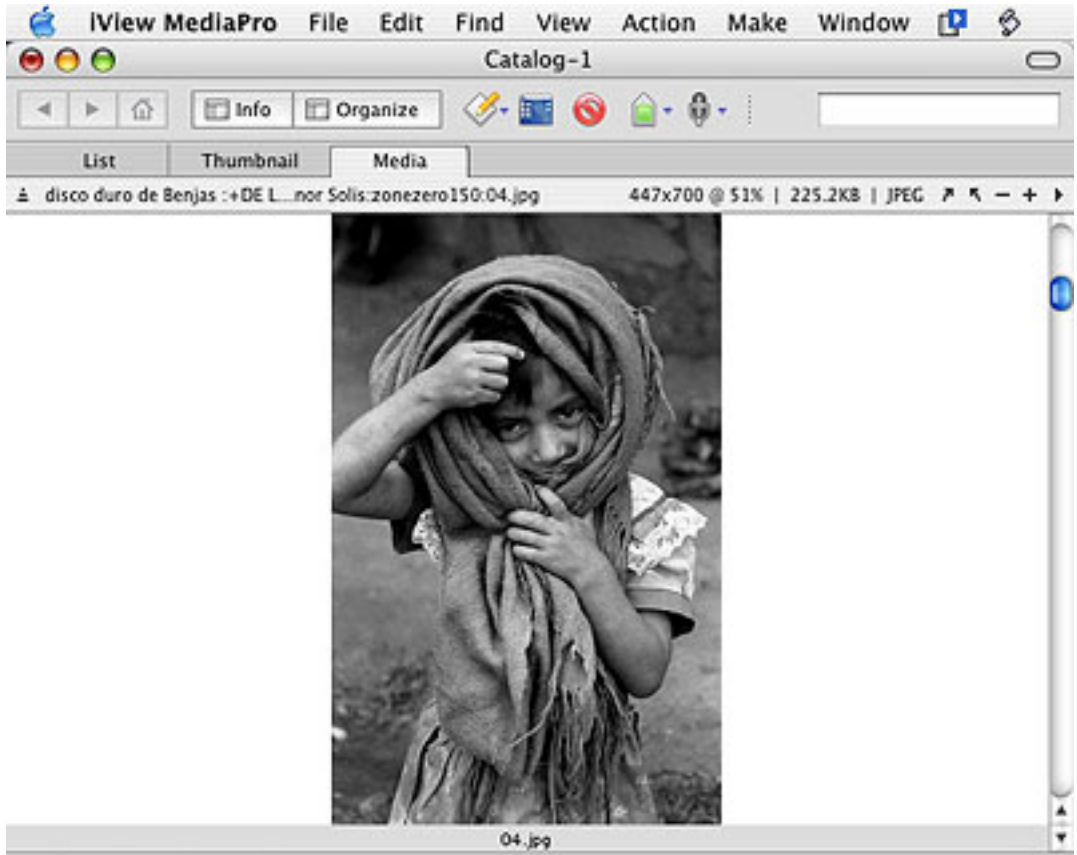

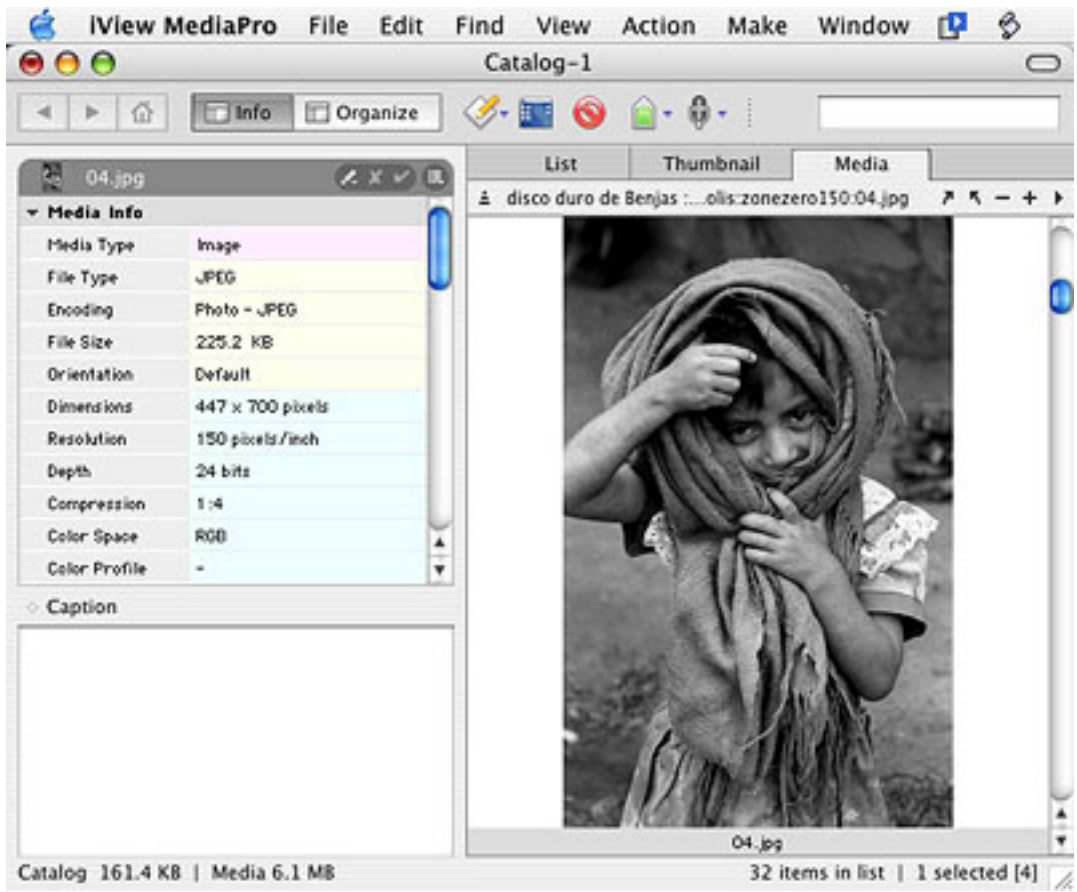

Written by Mariana Gruener

iView media is a program for making catalogues that help you to organize and find your files easily; it is designed for photographers, filmmakers or musicians that work with a lot of material.

iView media has the capacity of handling up to 8000 files per catalogue in its regular version. It is very easy to use, you just have to drag the folder or folders to a window that shows its contents, in which the images, files or audios appear either as a list, as icons or one at a time. The images can be seen up to a 2000% and the video or sound files start playing with a single click.
